

SeedFLOW Talc/Graphite

Graphite Blend

for Seed Drills

Especially suitable for sticky/moist seeds

- ✓ Improves the **flowability** of the seeds
- ✓ Separates **clumped seeds**
- ✓ Prevents **bridging**
- ✓ Fewer **gaps** and **double plantings**
- ✓ **Reduced** machine wear

Optimized Seed Placement during Sowing for Higher Yield with Noticeable Reduction in Wear

Our Agricultural Graphite SeedFLOW Talc/Graphite is a **blend** consisting of 80% talc and 20% graphite. Talc is a **pure natural product** that binds moisture exceptionally well. Combined with the lubricating properties of graphite, this results in significantly **improved seed flowability** and separation — even for treated or damp seeds. The application is straightforward and easy to use.

Application

Dosage depends on seed type, equipment, and humidity

- ✓ 100g-400g per 100kg of treated seed (wheat approx. 50g per 1000 seeds)
- ✓ 50g-200g per 100kg of untreated seed
- ✓ 100g per 100kg for seed >300g/1000 seed (e. g. maize, peas, ...)
- ✓ Adjust dosage if residues remain at the bottom of the seed container
